

INDIA · 2026

India's first AI Tax Optimizer for retail investors.

Automated tax-loss harvesting for the 1.5 crore Indians filing ITR-2.

Context & Problem Statement

Sahi Tax is an AI tax optimizer that automatically finds and executes Tax-Loss Harvesting (TLH) for retail Indian investors — a SEBI-compliant ₹2-5L/year service that HNIs use, but 99% of retail has never heard of.

CONTEXT

- 21.6 crore demat accounts; 1.5 crore file ITR-2 with capital gains
- ITR-2 filings grew +34.69% YoY in FY 2024-25 — fastest in India
- Section 74 of IT Act allows 8-year loss carry-forward
- Account Aggregator framework now live across all major brokers
- AI cost has collapsed 100x — first time TLH is buildable at scale

PAIN POINTS

- Awareness gap:** 99% retail don't know TLH exists
- Tracking complexity:** 8-year carry-forward state, 3 brokers, FIFO sequencing — humans give up
- Timing failure:** CAs file in July; March 31 window is gone by then
- Loss aversion:** selling at a loss feels bad — even when it saves real money
- Cost gap:** Portfolio Management Services (PMS) firms charge ₹5L+/year. Retail can't afford it.

OPPORTUNITY

- Save deterministically** — average user saves ₹8K+/yr with no market risk
- 8-year carry-forward bank** — every harvest builds a tax asset
- Behaviorally lazy** — 4 taps a year, not daily engagement
- Annual ritual built-in** — March + July = natural retention loops
- Replicable playbook** — scales to every ITR-2 filer in India

Fixing the awareness + execution gap is the fastest, cheapest lever to put real money back in retail investors' pockets.

The Hidden Gap

What HNIs do every March. What retail has never heard of.

WEALTHY

₹2-5L

per year

What HNIs save through tax-loss harvesting via PMS firms.

EVERYONE ELSE

₹0

per year

What 99% of retail investors save. Most don't know TLH exists.

WASTED

₹1.8L cr

FY22-24

Retail F&O losses (SEBI). Almost none claimed as carry-forward.

The largest 'service available to rich, missing for masses' gap in Indian finance.

Wealthy Indians have access to tax-loss harvesting via family offices and PMS firms. The other 14 crore investors don't even know it's legal — let alone how to do it.

Why nobody else is building this.

Brokers earn from your trades.

CAs file once a year, in July.

Section 74 of the Income Tax Act sits in the law books — useless without daily AI monitoring.

Nobody is structurally aligned with the retail investor on tax.

We are.

Key Metrics

NORTH STAR METRIC ♦ TAX SAVED PER USER PER YEAR

Higher tax savings per user directly proves Sahi Tax pays for itself many times over — without any market risk. It compounds with portfolio growth, drives word-of-mouth (₹X-saved is the most shareable claim in Indian fintech), and creates predictable yearly retention loops anchored to ITR season.

Metric	Definition	Why It Matters
Tax Saved / User / Year	Total ₹ saved through harvested losses	Direct, deterministic ROI proof
Carry-Forward Banked	Loss balance carried into future years	Compounds tax asset over 8 years
Harvest Conversion %	% of flagged opportunities executed	Trust signal — do users act on alerts?
Premium Conversion %	Free users → ₹499/yr Premium	Monetization quality
March-Madness Shares	Tax Saved Cards shared on WhatsApp	Viral coefficient — zero-CAC growth

Tax saved is the only fintech metric that's deterministic, falsifiable, and shareable. That's why it's our north star.

Stock Liquidator — the 4-step user flow.

From portfolio connection to ITR-ready report in four screens. Built for the salaried Indian who has 3 minutes, not 3 hours.

Connect → Select → Generate → File. Every step shows progress (Step X / 4). Every step explains the trade-off in plain language.

Portfolio Connection — 3 Viable Methods

How Sahi Tax actually pulls a user's holdings. Layered by friction, coverage, and regulatory load.

METHOD 1

✓ DAY 1 LAUNCH

CAS PDF Upload

Consolidated Account Statement

HOW IT WORKS

User downloads CAS from NSDL/CAMS/KFintech (free monthly email). Upload via drag-drop. We parse using pdfplumber + standardized regex.

Coverage

Universal — every demat holder

Friction

Low — 30 sec drag-drop

Regulatory

Zero — user shares own document

⚠ THE CATCH

Data is up to 30 days stale. Solution: combine with live NSE/BSE price feed.

METHOD 2

WEEK 6 ROLLOUT

Account Aggregator

Sahamati / RBI framework

HOW IT WORKS

User picks AA partner (Finvu/OneMoney). One OTP authorizes. AA pulls from Zerodha, ICICI, AMCs, etc. continuously. RBI-regulated, encrypted, revocable.

Coverage

Demat + MF + bank + insurance

Friction

Lowest — 1 OTP, no upload

Regulatory

Need FIU registration via SEBI RIA partner

⚠ THE CATCH

Read-only. Cannot execute trades. Costs ~₹5-15 per consent pull at scale.

METHOD 3

MONTH 3+ ROADMAP

Direct Broker APIs

Zerodha Kite Connect, Upstox, ICICI Breeze

HOW IT WORKS

OAuth flow per broker. User logs in via broker portal. Token grants both read AND execute permissions. One integration per broker.

Coverage

Portfolio + live execution

Friction

Medium — OAuth per broker

Regulatory

SEBI RIA license needed (₹3-5L, 4-6 months)

⚠ THE CATCH

Each broker = 1-2 weeks of integration. Zerodha first (25% retail share), then expand.

Layered launch strategy: CAS for instant Day-1 coverage → AA for smooth UX at 50K users → Broker APIs for execution at 500K. Each layer earns the right to the next.

"Why can't I just paste my portfolio into ChatGPT?"

It's the smartest objection a reviewer will raise. Here's why a generic LLM — or a Claude Skill / Custom GPT — fundamentally cannot do this job.

	GENERIC LLM	SAHI TAX
	ChatGPT · Claude · Custom GPT · Claude Skill	Purpose-built rule engine + LLM explanation layer
MEMORY & STATE	✗ Stateless. Forgets you next session. Cannot track 8-year carry-forwards across years.	✓ Persistent state. Tracks every booked loss, applies oldest-first across 8 FYs automatically.
LIVE MARKET DATA	✗ No real-time prices. Hallucinates current NAVs and cost basis. Trained data is months old.	✓ NSE/BSE/AMFI feeds in real time. Cost basis verified from CAS / Account Aggregator.
DETERMINISM	✗ Same prompt → different answer. Temperature randomness. Drifts across model versions.	✓ Deterministic Python rule engine. LLM only explains the decision, never makes it.
EXECUTION	✗ Tells you to sell. You manually copy 4 trades into Zerodha. Half of users never finish.	✓ One-tap execution via Kite Connect. Order fires; replacement bought; carry-forward logged.
INDIA-SPECIFIC LAW	✗ Generic global tax knowledge. Confidently wrong on Section 94(7), 94(8), bed-and-breakfast rules.	✓ Rule engine encodes Section 74/94 nuance. CA-firm audited. ITR Schedule CFL auto-generated.
ACCOUNTABILITY	✗ OpenAI/Anthropic TOS: "output may be inaccurate." Get a tax notice — you're on your own.	✓ SEBI-RIA partnership. CA review on high-value cases. Errors-and-omissions insurance.

LLMs are the explanation layer, not the decision layer. We built the deterministic engine that does TLH correctly — and use Claude to make it sound human.

TAM — 1.5cr power users today, doubling every 2.5 years.

21.6 crore

Demat accounts in India

Upper bound

9.25 crore

Active SIP accounts

Tomorrow's ITR-2 filers

8.56 crore

ITR filers FY 2024-25

Tax-aware base

1.5 crore

ITR-2 filers

POWER-USER TAM TODAY

ITR-2 filings grew +34.69% YoY in FY 2024-25 — fastest-growing ITR category in India.

Market Potential — sizing the ₹ pool, not just the user pool.

How much tax money is actually sitting unclaimed by retail India every year? And how much of it can a 1%-of-tax-saved pricing model realistically capture?

BOTTOM-UP MARKET SIZING

ITR-2 filers (capital gains)	1.5 crore	CBDT FY24-25
Avg realized capital gains per filer	₹2.3 lakh	Industry blended estimate
Blended cap-gains tax rate	~15%	STCG 20% + LTCG 12.5% mix
Total tax paid on retail cap-gains	₹52,500 cr / yr	1.5 cr × ₹35K avg tax
Share with harvestable losses (~30%)	₹15,000 cr / yr	Unrealized losses available

HARVESTABLE TAX - SAVINGS POOL

OUR REVENUE CAPTURE

PRICING MODEL: 1% of tax saved		
Performance-fee structure (like HNI PMS firms). User pays only on rupees actually saved — aligns incentives perfectly. Floor: ₹499/yr Premium tier covers users with smaller savings.		
MARKET SHARE	SCENARIO	ARR @ 1%
100% market capture	Theoretical ceiling	₹150 cr
25% in 5 years	Aggressive bull case	₹37 cr
10% in 3 years	Realistic Y3 target	₹15 cr
5% in 18 months	Conservative MVP	₹7.5 cr

1%-of-tax-saved is one revenue stream. Layered on top of ₹499/yr Premium + ₹999 Vault + B2B CA partnerships, total Y3 ARR reaches ~₹230 cr (Slide 14).

₹15,000 crore is sitting unclaimed by retail India every year. Even capturing 1% of 10% of that pool puts Sahi Tax at ₹15 cr ARR — and we're just getting started.

Who we're building for.

ARJUN, 30

Salaried IT, Bengaluru

- ₹6L portfolio, active rebalancer
- Saves ₹8K-15K/year

PREMIUM TIER

~7 crore segment

PRIYA, 35

SIP saver, Indore

- ₹3L portfolio, just sold first MF batch
- Saves ₹3K-8K/year

PREMIUM TIER

~5 crore segment

SHARMA UNCLE, 58

Inherited portfolio, Pune

- Multiple demats, untracked carry-forwards
- One-time recovery: ₹50K+

VAULT TIER

~1 crore segment

100mn adoption is met by Arjun + Priya alone. Sharma Uncle is the high-WTP one-time-buyer pool that funds growth.

How we grow without burning capital.

MARCH-MADNESS VIRAL

Every user gets a personalized 'Tax Saved Card' in March. WhatsApp-shareable. Worst portfolios become best marketing.

CA PARTNERSHIP FLYWHEEL

100 partner CA firms refer their clients. We pre-fill their ITR data. B2B distribution moat.

FREE CARRY-FORWARD AUDIT

Free tool finds unused losses in past ITRs. 25-30% conversion to premium.

CREATOR + REDDIT SEEDING

Pranjal Kamra / Akshat Shrivastava audience. UGC writes itself ('I saved ₹X with this AI').

Target blended CAC: ₹15-30. Groww spends ₹500+. We earn it back in the first harvest.

Monetization — we save more than we charge, guaranteed.

T I E R	P R I C E	I N C L U D E S	Y 3 U S E R S	A R R
Free Tax Brain	₹0	Tax dashboard, alerts, ITR helper	1.5 crore	<i>Top of funnel</i>
Harvester Premium	₹499/yr	Auto-execution, replacement engine, carry-forward tracking	30 lakh	~₹150 cr
Vault	₹999 once	Past-ITR audit, family/HUF optimization, CA review	5 lakh	~₹50 cr
B2B (CA partnerships)	Per-seat	Bulk processing for CA firms	1,000 firms	~₹30 cr

Total Y3 ARR: ~₹230 crore. *Path-to-profitable within 36 months.*

THE PROMISE

"We save you more in tax than we charge — guaranteed, or it's free."

Why this survives competition.

1

Structural alignment

Incumbents earn on transactions. We earn when we save tax. They cannot honestly build this.

2

Compliance moat

Section 94/74 + 8-year tracking = the most-tested rule engine in India = high switching cost.

3

CA distribution moat

Embedded in CA workflows. Switching causes ITR disruption. Sticky B2B + B2B2C lock-in.

4

Data moat

Real-time tax behavior across millions of portfolios. Unique 'Indian retail tax mistake graph.'

5

Brand moat

First-to-market for 'India's tax-honest fintech.' Cred-style brand pull within 18 months.

Misalignment is the moat. Incumbents can't realign without breaking their own business model.

What could kill us — and how we survive.

RISK	PROBABILITY	MITIGATION
SEBI flags us as unregistered advisor	High	Frame as 'tools + education'; partner with RIA Day 1; apply for own RIA license in parallel.
Tax law changes (LTCG/STCG, carry-forward)	Medium	Modular rule engine; tax law rarely retroactive.
Broker API access blocked or limited	Medium	Launch advisory-only; add Zerodha Kite Connect first, expand later.
AI hallucination → wrong tax advice	High	Rule engine is deterministic, NOT LLM-generated. AI only explains. CA review on high-value cases.
Engagement gap (only return in March)	Medium	Premium triggers naturally on every gain booked; alerts feel like Spotify Wrapped.
Groww launches 'Portfolio Health Score'	Low-Med	Their version protects trading revenue → looks conflicted by design. Our positioning sharpens.

Every red risk has a deterministic mitigation. The compliance + RIA path is non-negotiable from Day 1.

Beyond TLH — the year-round AI tax advisor.

Sahi Tax wins by being the BEST at tax-loss harvesting first. From that trust, we expand into proactive year-round tax guidance — triggered by life events the user is already living through.

YEAR 1 — NOW

Tax-Loss Harvesting

The wedge product

Trigger: User uploads CAS or connects broker

▸ Sahi Tax says

"I found ₹49K in losses across your portfolio. Save ₹3,500 this FY in 1 tap. Plus ₹8K banked for 8 years."

CAPABILITIES

- Capital gains optimization (Sec 74)
- 8-year carry-forward tracking
- ITR-2 Schedule CG auto-fill

TAM: 1.5 cr ITR-2 filers

YEAR 2

Salary Optimizer

Proactive year-round nudges

Trigger: AA detects salary credit

▸ Sahi Tax says

"Your March salary just credited (₹1.2L). You can still invest ₹85K in ELSS by March 31 to save ₹26,500 in tax this FY."

CAPABILITIES

- Section 80C / 80D / HRA optimization
- New vs old regime live comparison
- RSU vesting + bonus tax planning

TAM expands to: 7 cr salaried filers

YEAR 3+

Continuous AI Advisor

The full year-round CFO

Trigger: Any major financial decision

▸ Sahi Tax says

"Thinking of selling your flat? Here's your tax: ₹4.2L LTCG. Reinvest in 54EC bonds within 6 months → save ₹84K. Want me to set a reminder?"

CAPABILITIES

- Real-time tax simulation on decisions
- HUF / family / NRI tax optimization
- ITR auto-prep across all schedules

TAM: 8.56 cr ITR filers (5x current)

Land-and-expand pattern: WhatsApp → WhatsApp Business. Razorpay → Razorpay X. Cred → Cred Mint. *Earn trust on TLH, expand from there.*

SAHI TAX

17 / 22

Why I can build this.

I built the manual version at Darashaw

SEBI-compliant 5-signal risk framework. Sharpe Ratio scoring on equity, debt, hybrid funds for 50+ clients.

I've already built the analyst layer Sahi Tax automates — by hand, for the rich. Now I'm scaling it for everyone.

Product chops at InMobi

A/B testing recovered \$100K in revenue leakage. KPI alerting on Databricks. Doubled segment revenue \$100K → \$200K in 4 months.

I know how to ship instrumented financial products that scale.

Domain depth — BITS Pilani, Minor in Finance

Derivatives & Risk Management, Security Analysis & Portfolio Management, Business Analysis & Valuation.

Not LinkedIn-deep. Course-deep. I read Section 74 in the original Act.

Built for Bharat

Led PARC's Digital Literacy Program for rural women, Oct 2023 – Aug 2024.

I've sat across from the user this product serves. Vernacular UX is a default, not a feature.

At Darashaw, I was the analyst doing this manually for 50 wealthy clients. Sahi Tax is that work — automated, scaled, made affordable for 1.5 crore Indians who never had access.

Appendix A — Unit Economics

CAC (blended)	₹15-30	<i>Lower than Groww's ₹500+ via viral + CA channels</i>
Cost-to-serve free user	₹3/year	<i>LLM API + AA infra</i>
LTV of premium user	₹2,000+	<i>4-year average retention</i>
LTV / CAC ratio	60-100x	<i>Among the best in Indian fintech</i>
Path to profitability	Month 24	<i>Modeled at 15% premium conversion</i>

Appendix B — Technical Architecture

FRONTEND	Next.js + Tailwind + shadcn/ui	Mobile-first PWA. No native app needed for v1.
CAS PARSING	Python + pdfplumber	Standardized NSDL/CDSL CAS format.
ACCOUNT AGGREGATOR	Sahamati framework (via Finvu)	RBI-approved consent rails. Launch partner: Finvu.
RULE ENGINE	Deterministic Python	Audited by CA firm. Section 74/94 logic encoded.
LLM EXPLANATION LAYER	Claude API	Never decides. Only explains rule-engine output.
BROKER ROADMAP	Zerodha → Upstox → Angel One → ICICI	Kite Connect first (25% retail share).

Appendix C — Where we sit.

We're alone in the high-high quadrant. That's the moat.

Appendix D — Sources.

SOURCE	PUBLICATION	DATE	KEY DATA POINT
SEBI	F&O Study	September 2024	93% retail F&O traders incurred losses; ₹1.8L cr cumulative losses FY22-24
AMFI	Monthly Note	September 2025	9.25 crore active SIP accounts; ₹29,361 cr SIP inflows
CDSL/NSDL	Depository Statistics	December 2025	21.6 crore total demat accounts in India
CBDT	ITR Statistics	FY 2024-25	8.56 crore ITR filers; ITR-2 grew 34.69% YoY
IT Act	Sections 74, 94(7), 94(8)	Govt of India	Carry-forward, dividend stripping, bonus stripping rules
MoSPI	PLFS Annual Report	2025	61.6 crore employed workforce; 23.6% regular salaried
